"The Kuan-yin will not be able to maneuver instantly," Stormbel answered. "By accelerating ahead of the Mayflower ii at maximum power immediately after detaching, we would be behind the planet long before the Kuan-yin could possibly be brought to bear. After that we can take up an orbit that would maintain diametric opposition." LIBRARY OF CONGRESS CATALOGING-IN-PUBLICATION DATA. "Did anybody see the news today? Some scientist or other thinks the Chironians could be building bombs. There was an interview with Kalens Wo. He said we couldn't simply take it for granted that they're completely rational down there." Instead of a bath, she took a shower. Her soap of choice? a cake of Ivory? worked well enough to. Borftein halted and stood upright and erect before the desk. "Whatever you thought was mistaken. I am still the Supreme Military Commander of this Mission, and you obey my orders before any others. "I'd like them to have the chance to Make the best lives for themselves that they can, sure. They've got that chance right here. We don't have to go halfway round the planet to recreate part of a world we don't belong to anymore. It couldn't last. That's all over now. You have to bring yourself to face up to it, hon." The boy is neither barefoot nor a clown, and so after a brief confusion, he realizes she's talking about the. "I said you can stuff it." Suddenly the feeling of intimidation that had haunted Bernard for years was gone. The role that he had allowed himself to be twisted and bent into shriveled and fell away like an old skin being sloughed off. For the first time he was-himself, and free to assert himself as an individual. And on the far side of the desk before him, the granite cathedral cracked apart and collapsed into rubble to reveal . . . nothing inside. It was a sham, just like all the other shams that he had been running from all his life. He had just stopped running.. The colonization of Chiron was over.. The motor home is rolling along at the speed limit or faster, and he assumes that the owners? the man. Kath smiled on the other side of the room. "I was from the first batch to be created. There were a hundred of us. Leon -he's Adam's father--was another. We called the machine that taught us how to use firearms Mickey Mouse because it had imaging sensors that looked like big black ears. I shot a daskrend when I was six... or maybe less. It came at Leon from under a rock, which was why the satellites hadn't spotted it. He's still got a limp today from that." She emitted a soft chuckle. "Poor Leon. He reminds me of Lurch." .wide and shining with fear. The posture of a fright-buckled child: tensed body, hunched shoulders, head. Jay began speaking earnestly and in a low voice. "My father asked me to find you. It's urgent. One of the people the SDs are looking for is at the house. Sterm has arrested the whole of Congress, and we're pretty sure he's going to issue an ultimatum with the Military. If they do the Chironians will take out the whole ship. Pa wants to go with our guy and talk to Kath to see if they can do something, but they need help getting out of Phoenix." In a secluded wing high up in one of the towers of the Government Center, a white-jacketed steward, who had emigrated to America from London in his youth and had been recruited for the Mission as a result of a computer error, whistled tunelessly through his teeth while he wheeled a meal trolley stacked with used dishes toward the small catering facility that supplied food and refreshments for the conferences, meetings, and other functions held in that part of the complex. He didn't know what to make of the latest goings-on, and didn't care all that much about them, for that matter, either. It was all the same to him. First Wellesley was in, and they wanted twelve portions of chicken salad and dessert; then Wellesley was out and Sterm was in, and they wanted twelve portions of chicken salad and dessert. It didn't make any difference to him who-. time-distorting August heat, they were as silent as the trinity of flames bright upon the smokeless wicks. The pacifist laughed knowingly. When the waitress approached, he waved her away. Then he produced. "With active opposition around, you wouldn't want to be risking complications with remote links into it." He was telling Lechat that if the transmission was going to go out, that was where it would have to go out from and that was where Lechat would have to go to make it. But more to the point, as Lechat well knew, Bernard was saying that Celia would have to go there too; what she had to say couldn't come second-hand through anybody else.. A groundcar passed by and several Chironians waved at them from the windows. "It can't be quite like that," Jay said. "That woman I was talking about told Jerry Pernak that a research job at the university would pay pretty well. That must have meant something." Fallows appeared surprised. "I thought it was closed off for another two days. Isn't the Army having an exercise in there or something?" "Hey, you haven't asked me," Chang said. "I beat that." No meanness is evident in this tall, somewhat portly man, no suspicion or calculation in his twinkling blue. The girl put down the beer? on the far side of her plate, out of Micky's reach. Wind blusters like restless bears at the bars of a cage, but this is a mildly.If the Chironians were already fitting out the Kuan-yin, they must have solved a lot of the problems that were still being argued on Earth, Colman thought. The whole planet, he realized as he reflected on it, was a powerhouse of progress, unchecked by any traditions of unreason and with no vested-interest obstructionists to hold it back. If the pattern continued until Chiron became a fully populated world, it would effectively leave Earth back in the Stone Age within a century. "Have you actually flown it anywhere yet?" he asked, turning his head toward Kath. "The Kuan-yin . It's too messy, and too many of the wrong people get hurt, they go for the grass roots. They start people thinking and asking questions they've never been taught how to ask before, and they'll take away the foundations piece by piece until the roof falls in." He paused and continued staring at the wall. "You're an engineer, and she runs part of a fusion complex. If you want out, you've got a place to go. That's what she's telling you."."Yeah, but it never quite makes up for always being the bearer of bad news." He stepped back from the.either corner of her mouth, and no sportive note informed her voice as she met Micky's stare with a.future at all..crop of fiery red hair snares Curtis by the shirt, nearly causing him to skid off his feet. "Hey, hey, hey!.But no Borftein was present to save the situation at the side entrance. "I don't know anything about it," the SD Officer of the Day said from the screen in reply to the call the guard there had put through. "Those orders are incorrect. Detain those men." The guard on duty at the desk produced a pistol and trained it on Maddock, who was standing where he had been stopped ten feet back with Harding and Merringer. In the same instant the two SD's standing farther back covered them with automatic rifles..Not far from Borftein, Wellesley and Lechat were talking via a large screen to the Chironians Otto and Chester. Behind them at one of the center's monitor consoles, Bernard, Celia, and a communications operator were staring at two smaller screens, one showing Kath's face, and the other a view of the confusion inside what was left of a feeder ramp cupola..The Two Moons occupied one end of the basement and ground-floor levels of a centrally located confusion of buildings facing the maglev terminal complex across a deep and narrow court, and had a book arcade above, which turned into .residential units higher up. It comprised one large bar below sidewalk level, where floor shows were staged most nights, and two smaller, quieter ones above. Kath suggested one of the smaller bars and Colman agreed, permitting himself for the first time the thought. that a pleasantly romantic interlude might develop, though why he should be so lucky was something he was far from comprehending. If it happened, he wasn't going to argue about it..Hanlon walked over and sat down in the booth as business returned to normal. "They hew you were here, Steve. Unfortunately from your point of view, however, we now see it was in vain." He turned his eyes away to address a point off-screen, presumably a display showing Otto and Chester. "And unfortunately from your point of view, I'm afraid that we deduced the secret of the Kuan-yin a long time ago.".Three obstacles now remained between Kalens and the vision that he had nurtured through the. years of presiding over the kind of neofeudal order that would epitomize his ideal social model. First there was the need to ensure his election to succeed Wellesley; but Lewis was coordinating an effective media campaign, the polls were showing an excellent image, and Kalens was reasonably confident on that score. Second was the question of the Chironians. Although he would have preferred Borftein's direct, no nonsense

approach, Kalens was forced to concede that after six years of Wellesley's moderation, public opinion aboard the Mayflower II would demand the adoption of a more diplomatic tack at the outset. If diplomacy succeeded and the Chironians integrated themselves smoothly, then all would be well. If not, then the Mission's military capabilities would provide the deciding issue, either through threat or an escalated series of demonstrations; opinions could be shaped to provide the justification as necessary. Kalens didn't believe a Chironian defense capability existed to any degree worth talking about, but the suggestion had potential propaganda value. So although the precise means remained unclear, he was confident that he could handle the Chironians. Third was the question of the Eastern Asiatic Federation mission due to arrive in two years' time. , With the first two issues resolved, the material and industrial resources of a whole planet at his disposal, and a projected adult population of fifty thousand to provide recruits, he had no doubt that the Asiatics could be dealt with, and likewise the Europeans following a year later. And then he would be free to sever Chiron's ties to Earth completely. He hadn't confided that, part of the dream to anyone, not even Celia..He's rapidly losing confidence. Lacking adequate self-assurance, no fugitive can maintain a credible. everyone was beautiful and rich and happy. She didn't. the bed and on a straight-backed chair; neither the luggage nor the furniture suggested a strategy for this. Sinsemilla's fury-widened eyes, white all around, rose like two alien moons in Micky's memory. She. "They're messing us around," General Johannes Borftein, Supreme Commander of the Chiron Expeditionary Force--the regular military contingent aboard the Mayflower II--told the small group that had convened for an informal policy discussion with Garfield Wellesley in the Mission Director's private conference room, located in the upper levels of the Government Center in the module known as the Columbia District. His face was sallow and deeply lined, his hair a mixture of grays shot with streaks of black, and his voice rasped with a remnant of the guttural twang inherited from his South African origins. "We've got two years to get this show organized, and they're playing games. We don't have the time. We haven't seen any evidence of a defense program down there. I say we go straight in with a show of strength and an immediate declaration of martial law. It's the best way." circumference of each iris.. The small group of Chironians watching from a short distance away and the larger crowd gathered behind them in the rear of the antechamber applauded enthusiastically and beamed their approval. They weren't supposed to do that. It didn't preserve the fight atmosphere.. As the snake slithered along the wall and under the tall chest of drawers, Sinsemilla bounced on the bed. Colman shook his head slowly. There had been too much to think about in too little time. It was always the same; whenever the pressure was at its highest, there was invariably one thing that everybody missed because it was too obvious. They had all been so preoccupied with thinking of how to stop Stern from getting into the Battle Module that none of them had allowed for the obvious possibility of his being there already.. Lechat pursed his lips for a second, and then nodded curtly. "It do it," he said simply. He averted his eyes for a moment longer, and then looked across at Celia. The others had read, the same thing and followed his gaze, knowing what they were asking her to do. Colman could see the torment in her eyes as she looked back at Lechat. After all that had happened, she would have to leave the safety and security of Franklin to return to Phoenix, from there to the shuttle base, and then all the way back up to the Mayflower II. There was no other way.. hearts, wounded minds, torn spirits.. Then, slowly, she realized what her mind had responded to unconsciously in the faces of the three children in the Chironian sculpture. The artist had been not merely an expert, but a master. For fear was there too, not in any way that was consciously perceptible, but in a way that slipped subliminally into the mind of the beholder and gripped it by its deepest roots. That was why she had felt disturbed all the way back from Franklin. But there was still something else. She could feel it tugging at the fringes of awareness-something deeper that she hadn't grasped even yet. She turned her eyes to the sculpture again.. "I never lost myself." true, all right." .~That was exactly what Gustav said we should do," Ci said, giving Colman an approving look. "He was looking at it yesterday." Jesus, he thought, he was sick of the system. It went back a lot longer than twenty years, for what was the Mayflower II but an extension of the same system he'd been trying to, get away from all his life? lay was beginning to feel the trap closing around him already. And none of it was going to change--ever. Chiron wasn't going to be the way out that Colman had hoped for when he volunteered at nineteen. They had brought the system with them, and Chiron was going to be made just another part of it.. Backlit by the westering sun, wearing khaki shorts and a white T-shirt with a small green heart. coming back to us one day? a year from now, two years? in a new body. It's safer that way." Colman smiled ruefully. "I don't have any fine family pedigree or big family trees full of famous ancestors to talk about," he warned.. At the end of the hall, her room was small but not cramped, and nothing about it cried hospital or. Hanlon made a throwing-away motion in the air. "Ah, this is all getting to be too serious for a Saturday night. Why are we talking like this at all? Are we letting silly rumors get to us?" He looked at Sirocco. "Our glasses are nearly empty, Your Honor. A round was part of the bet." "You can't be soft with people like this," Borftein said bluntly. "Give them a yard, and they'll hate you because they want a mile. Give them nothing and clamp down hard, and later on they'll love you for giving them an inch. I've seen it all before." Constance Tavenall? no doubt soon to cleanse herself of the name Sharmer? stared at the TV. She. Bernard's jaw dropped. "Stern?" he gasped, then looked down at Celia. "You did tell him?" "What you've got there is at least three times the value of your rustbucket Chevy. Plus the cost of the. The plosive squeal of air brakes, recklessly applied so late, reveals the driver not as a man at the mercy. "They'll say he never existed, that I'm just disturbed and invented him, like an imaginary playmate." Mrs. Crayford glanced at the dock display on the room's companel. "Well

then, I really must be getting along. I did so enjoy the trip and the company. We must do it again soon." She heaved herself to her feet and looked around. "Now, where did I leave my coat?" often expected to find a secret door to fantastic other lands, but she had been routinely disappointed, so Ci repeated the performance. "Who are you?" she asked him. At that moment Stanislaw emitted a triumphant shout, and Bernard straightened up behind him to look across at Colman. "He's done it!" Bernard exclaimed. They moved over to see for themselves, and Sirocco came across from the platform. The rest of the mess hall quieted down. The screen in front of Stanislaw was showing the day's duty roster for the entire infantry brigade. Walters grunted, scanned quickly over the displays, and called the log for the last four hours onto an empty screen. "You know what I think?" Micky asked. Colman's eyebrows arched in surprise. "True, but-wow! I had no idea that anything here was that advanced." Experiments and research into harnessing the potential energy release of antimatter had been progressing on Earth since the first quarter of the century, primarily in connection with weapons programs. The attraction was the theoretical energy yield of bringing matter and antimatter together- one hundred percent conversion of mass into energy, which dwarfed even thermonuclear fusion. For bombs and as a source of radiation beams, the process had devastating possibilities, and it had been appreciated for a long time that such a beam would offer a highly effective means of propelling a spacecraft.
